

PROJECT DAY

"14th Creative Paradigm, 2023", Project Day was conducted on 22nd July, at AECS Magnolia Maaruti Public School based on the theme "G 20- Making a Better World for Us and Our Future Generations to Come". The Project Day was an interactive event for students with quick learning opportunities and interactive approach in propagating knowledge. Students from grade IX and X participated wholeheartedly towards the success of this grand event. The triumph was made by the relentless efforts of our Principal, Dr. Seema Goel. The Project Day provided an opportunity to give wings to the students' imagination and bring forth ideas to present them in the form of models, charts and activities. They were given the prospect of learning and exploring the known and unknown aspects of the given theme at deeper level. Undertaking project work on G 20 topics such as anti-corruption, culture, agriculture, disaster risk reduction, climate sustainability, energy transitions health and tourism helped the students to gain knowledge about G 20. The working models made by students were exquisite as they were complemented with excellent explanation. The students displayed their novice innovations, ideas and interests, in the best possible way. Grade VII TO XI students showed their talent in different fields like AI, DEFENCE, SPACE, MICROORGANISMS & ASIAN CIVILISATION.

Here are the glimpses of the event:-

Projects are a fun way to add hands-on activity to the class. The 14th Creative Paradigm 2023 created such a platform for the students of AECS Magnolia Maaruti Public School, to learn and explore the known and unknown aspects of various topics at a deeper level. It gave them an opportunity to unleash their imagination and creativity in science, technology and history. Moreover, the interactive sessions with teachers and parents helped them to generate quick learning and thinking.

The topic for grades KG,1,2, and 3 was about Glory of India and the topic for grade 4 was Human Body and Diseases, whereas in grade 5, the topic was Work, Force and Energy and grade 6 worked on Evolution. The students exhibited their talents through extreme craftsmanship. They were well prepared with their topics and demonstrated them in front of the parents and teachers. We were proud to see a good number of footfalls and each one of them appreciated the projects and the efforts. Due to the cooperation of parents, the valuable guidance of the teacher and the dedication of the students Project Day was a grand success. Kudos to the young Magnolians, we are proud of you!!!
